

Behavioural Safety

Aims

Analysis of accident statistics indicates that the majority of incidents and accidents are attributable to human failure. Behavioural based safety aims to proactively manage situations where human factors contribute to accident potential. This one day workshop will identify methods to set up and manage a Behavioural Based Safety (BBS) programme.

Objectives

At the end of the programme delegates will be able to:

Understand how to monitor employees' behaviour effectively in a working environment
You will learn of the importance of a safety cycle and safety cultures
How to set up your own Behavioural Based Safety programme

Programme summary

Process Overview

Safety Management Systems
History of BBS
Psychology background, the safety cycle

Process Details

Planning process, including steering groups
Roles and responsibilities
Appointment of observers
Behavioural safety cycle

The Observation

Purpose and methodology
Planning and approach
Recording data
Prioritising findings

Risk Assessment

In the line of fire
At risk behaviour
Tools and equipment

All delegates will receive a certificate of attendance
Client specific process and procedures can be used throughout this session.
